

Job Opportunity

Established in 1998, Union Biometrica, is the pioneer in the development, manufacture, distribution and support of Flow Cytometry systems for the screening of “large” particles such as beads used in combinatorial chemistry libraries and small seeds, and for small multi-cellular organisms including *C. elegans*, *D.melanogaster*, and *D.rerio*. Union Biometrica’s proprietary COPAS systems are helping to accelerate research in application areas such as genetic and compound screening, functional genomics, target identification/validation, stem cells clusters and in-vivo toxicology HTS. Using one of our various application specific COPAS systems, researchers can analyze, sort, and dispense objects with a higher precision and speed than any other commercially available technique, thereby dramatically reducing the time required for experiments and even enabling new, previously unfeasible experiments to be performed.

For the support of these activities in the field, Union Biometrica is currently has a position open in our European Headquarter in Belgium for:

Application/Support Specialist-Europe (M/F)

Your function

- Application and technical support during the sales process
- Giving scientific presentations at scientific meetings
- Interaction with scientists for new applications into emerging markets
- 60%-70% travel within Europe
- Writing scientific technical notes related to new applications

Your profile

- You have a degree in biology, or related life science field
- Experience in flow cytometry is a strong plus point
- You are fluent in English - multiple European languages is a strong plus point
- You are customer oriented, can work independently and together with teams
- You have a strong scientific interest in the Life Sciences
- Based in Belgium or The Netherlands.

Our Offer

Union Biometrica offers a competitive salary, bonus scheme and advantages. You have a chance to participate in a young and growing company working in a creative scientific atmosphere with a technology that has no competitors. Company allocated in Geel, Belgium.
